Confidential — for bank, mobile money operator, and payment aggregator discussions
Date: May 2026
Company / product: Broadway Property Management (Rwanda property SaaS)
Technical contact: [Your name, email, phone]
Repository (private demo available on request): Broadway-Property-Management

Purpose of this document

Broadway Property Management is preparing to integrate official payment and settlement APIs so landlords can collect rent digitally and the platform can reconcile tenant payments against bank and mobile-money statements.

We request a technical partnership meeting and access to sandbox / UAT APIs with your institution.

Important: Our platform is not yet connected to any live bank or MoMo API. This document describes what we have built, what we need from you, and how integration would work.

About Broadway (one paragraph for executives)

Broadway is a cloud property-management platform for Rwanda landlords, property managers, and tenants. It manages buildings (including UPI land references), units, leases, rent invoices, tax obligation tracking (RRA prep), and payment proof workflows. We sell subscription plans from 35,000 RWF/month (Starter) to enterprise custom pricing, and support platform partners who resell the product to multiple landlord clients.

Current payment model (MVP): Tenants upload manual proof (MoMo SMS screenshot or bank transfer reference); landlords approve in the dashboard.

Target model: Live checkout / collect APIs + webhooks + statement reconciliation.

What we have already built (technical readiness on our side)

Item	Status
REST API (NestJS, PostgreSQL)	Production-oriented MVP
Payment entity: methods `BANK_TRANSFER`, `BANK_GATEWAY`, `MTN_MOMO`, `AIRTEL_MONEY`, `CASH`	Done
Landlord payment settings (toggle MoMo/bank/gateway)	Done
Tenant proof upload (image/PDF)	Done
Owner approve/reject workflow	Done
Gateway adapter interface (`PaymentGatewayService`)	Done — **awaiting your API**
Webhook endpoint stub `POST /payments/webhooks/provider`	Done — will add HMAC verification
Rwanda commercial bank name reference list	Static catalog in code
Invoice PDF generation	Done
Multi-tenant landlord workspaces	Done

We can complete integration in 6–10 weeks after sandbox credentials

What we are requesting from your institution

4.1 For banks (BK, BPR, Equity, I&M, Ecobank, KCB, GT Bank, Access, NCBA, etc.)

Request

Why we need it

****Merchant / aggregator API****
documentation (collections, status query)

Tenant rent collection

****Sandbox / UAT** environment + test
accounts**

Safe development

****Webhook specification**** (payment
success, failure, reversal)

Update invoice status automatically

****Statement or transaction export API****
(or SFTP CSV spec)

Reconcile proof vs actual credit

****OAuth / API key**** onboarding process
and compliance checklist

KYC for Broadway as merchant

****Fee schedule**** (per transaction, monthly)

****Settlement timing**** (T+0, T+1)

Named **technical contact** at bank

4.2 For MTN MoMo (Rwanda)

#	Request
1	**MoMo Collections API** (Request to Pay / Collect) documentation
2	Sandbox merchant ID and API user
3	Callback URL registration process
4	Transaction status query API
5	Dispute / reversal handling guide
6	Commercial terms for property-management sector

4.3 For Airtel Money (Rwanda)

#	Request
1	**Airtel Money merchant / collections API** documentation
2	Sandbox credentials
3	Webhook / callback specification
4	Statement or reconciliation file format

Proposed integration architecture

```
Tenant (MoMo / bank app)
%
%
%
[Your institution API] % % webhook % % % Broadway API (NestJS)
%
% % % Update Payment status
% % % Mark Invoice PAID
% % % Notify landlord (email/WhatsApp)
%
%
Settlement to landlord designated account (per your rules)
```

Security commitments from Broadway:

- TLS 1.2+ on all endpoints
- Webhook signature verification (HMAC / JWT per your spec)
- No storage of full card PAN (if applicable)
- Secrets in encrypted environment variables
- Audit log of payment state changes
- Data processing aligned with Rwanda Law No. 058/2021 on personal data

Use cases we will enable (post-integration)

1. Tenant pays rent from portal via MoMo or bank redirect — instant status.
2. Landlord dashboard shows collected vs outstanding per building/unit.
3. Reconciliation job matches your settlement file to open invoices (Phase 2: OCR on uploaded statements).
4. Platform operator sees rolled-up collections across multiple landlord clients.
5. Optional: Broadway subscription fee collection via same rail (SaaS billing).

Volume projections (for your risk team)

Phase	Timeline	Tenants / transactions
Pilot	Months 1–3	50–200 tenants; low hundreds of tx/month
Growth	Months 4–12	2,000+ tenants; thousands of tx/month
Scale	Year 2+	Negotiate enterprise pricing

*Figures are estimates for sandbox approval — v

Compliance & business documents we can provide

- Company registration (RDB)
- Tax identification (TIN)
- Director ID / beneficial ownership (on request)
- Privacy policy and terms of use (hosted on production URL)
- Technical security overview (this document + DEVELOPER_HANDOFF)
- Demo environment walkthrough (video or live session)

FAQ for partner technical teams

- Q: Are APIs already live in production?
A: No. We use manual proof upload today. Gateway is not yet connected.
- Q: Do you store MoMo PINs?
A: No. We never ask for PINs. We use your hosted MoMo service.
- Q: Do you support split settlement to multiple landlords?
A: Planned via accountId per payment; we need to discuss with you.
- Q: Currency?
A: RWF only for MVP.

Meeting ask

We request a 60-minute technical workshop covering:

- 1. Sandbox access process and timeline
- 2. Webhook and idempotency requirements
- 3. Reconciliation file format
- 4. Go-live certification checklist
- 5. Commercial contact for MoU

Suggested attendees (Broadway): Founder, lead developer

Suggested attendees (Partner): API product manager, integration engineer, compliance
